

## 11.1. AUTOMATIC INDEXING OF OSCILLATION IMAGES

### 11.1.5. The program

The auto-indexing program has been written in C and implemented on an SGI O<sup>2</sup> workstation. It is a component of the general data-processing system (*DPS*). The auto-indexing component of *DPS* is available over the web, including the source code. The run-time for auto-indexing is sufficiently short for the procedure to be run interactively. The program described here is now included in the *MOSFLM* data-processing package (Leslie, 1992).

### Acknowledgements

This short article is adapted from a fuller description of the auto-indexing procedure (Steller *et al.*, 1997). I thank Cheryl Towell and Sharon Wilder for help in the preparation of this manuscript. The work was supported by a grant from the National Science Foundation to MGR. Ingo Steller, who wrote and developed the program, was supported by a Deutsche Forschungsgemeinschaft postdoctoral fellowship.
