

24. CRYSTALLOGRAPHIC DATABASES

Table 24.5.9.1. *PDB information sources*

Source	Information content
http://www.rcsb.org/pdb/ and http://www.pdb.org/	Main PDB web site
http://rutgers.rcsb.edu/pdb/ (Rutgers)	RCSB member institution PDB web sites
http://nist.rcsb.org/pdb/ (NIST)	
http://www.rcsb.org/pdb/mirrors.html	List of all RCSB PDB mirrors
http://pdb.rutgers.edu/adit/	<i>ADIT</i> web site (Rutgers)
http://pdbdep.protein.osaka-u.jp/adit/	<i>ADIT</i> web site (Osaka University, Japan)
http://pdb.rutgers.edu/validate/	<i>ADIT</i> validation server
http://www.rcsb.org/pdb/newsletter.html	RCSB PDB newsletter
http://www.rcsb.org/pdb/linking.html	Enzyme classifications and nomenclature
http://www.rcsb.org/pdb/ftpproc.final.html	FTP mirroring information
http://www.rcsb.org/pdb/cdrom.html	CD-ROM ordering information
info@rcsb.org	General help desk
deposit@rcsb.rutgers.edu	Data processing correspondence

contents of the PDB as it existed on a specific date; preservation of software, derived data, ancillary data and all other computerized and printed information; automatic archiving of all depositions and the PDB production resource; and maintenance of the PDB correspondence archive that documents all aspects of deposition. During the transition period, all physical materials including electronic media and hard-copy materials were inventoried and stored, and are being catalogued.

24.5.6. Maintenance of the legacy of the BNL system

One of the goals of the PDB has been to provide a smooth transition from the system at BNL to the new system. Accordingly *AutoDep*, which was developed by BNL (Brookhaven National Laboratory, 1998) for data deposition, has been ported to the RCSB site and enables depositors to complete partial depositions as well as to make new depositions. In addition, the EBI accepts data using *AutoDep*. Similarly, the programs developed at BNL for data query and distribution (*PDBLite*, *3DB Browser* etc.) are being maintained by the remaining BNL-style mirrors. The RCSB provides data in a form usable by these mirrors. Finally, the style and format of the BNL ftp archive is being maintained at <ftp://bnlarchive.rcsb.org>.

Links to the PDB at BNL were automatically redirected to the RCSB after BNL closed operations on 30 June 1999 using a network redirect implemented jointly by RCSB and BNL staff. External resources linking to the PDB are advised to change any URLs from <http://www.pdb.bnl.gov> to <http://www.rcsb.org>.

24.5.7. Current developments

An important role of the PDB is to foster new standards and technologies important to researchers and educators using macromolecular structure data. To this end, the following are under development at the PDB.

The RCSB is leading the Object Management Group Life Sciences Initiative's efforts to define a CORBA interface definition for the representation of macromolecular structure data. This is a standard developed under a strict procedure to ensure maximum input by members of various academic and industrial research communities. At this stage, proposals for the interface definition, including a working prototype that uses the standard, are being accepted. For further details refer to <http://www.omg.org/cgi-bin/doc?lifesci/99-08-15>. The finalized standard interface will facilitate

the query and exchange of structural information not just at the level of complete structures, but at finer levels of detail.

As multimedia become more common, the opportunity exists to use them to deliver information on structure and function to a broad PDB user community *via* the web. To date we have developed prototype protein documentaries (Quinn, Taylor *et al.*, 1999) that explore these new media in describing structure–function relationships in proteins. It is also possible to develop educational materials that will run using a recent web browser (Quinn, Wang *et al.*, 1999).

Finally, it is recognized that structures exist both in the public and private domains. To this end we are planning on providing a subset of database tools for local use. Users will be able to load both public and proprietary data and use the same search and exploratory tools used at the PDB resources.

24.5.8. PDB advisory boards

The PDB has several advisory boards. Each member institution of the RCSB has its own local PDB Advisory Committee. Each institution is responsible for implementing the recommendations of those committees, as well as the recommendations of an international advisory board. Initially, the RCSB presented a report to the advisory board previously convened by BNL. At their recommendation, a new board has been assembled which contains previous members and new members. The goal was to have the board accurately reflect the depositor and user communities and thus include experts from many disciplines.

Serious issues of policy are referred to the major scientific societies, notably the International Union of Crystallography (IUCr). The goal is to make decisions based on input from a broad international community of experts. The IUCr maintains the mmCIF dictionary as the data standard upon which the PDB is built.

24.5.9. Further information

The PDB seeks to keep the community informed of new developments *via* weekly news updates to the web site, quarterly newsletters and an annual report. Users can request information at any time by sending an e-mail to info@rcsb.org. Finally, the pdb-l@rcsb.org listserv provides a community forum for the discussion of PDB-related issues. Changes to PDB operations that may affect the community, for example data-format changes, are posted here and users have 60 days to discuss the issue before changes are made
